STR-1

The STR-1 transformer speed controllers are based on the principle of voltage control with auto-transformers. They are applicable to voltage-controllable motors (230 V, 50/60 Hz) to control in steps the rotational speed (of fans, pumps, etc.).

When choosing a controller it is important to know the maximum current intensity consumption on the taps. The indicated maximum current can be taken from each tap.

Wiring diagram

Type L22: by exchanging the fastonclip connectors on the transformer, one can adjust the order of switching and the voltage corresponding to each step of the switch.
